# ReactJs Final Logical Test

**09 JUNE 2021**

**READ INSTRUCTION**

submit code via github.com.

Make sure your code is formatted and readable

Attempt all questions in ReactJs. **Make sure to attempt all questions.**

Push your code on netlify or surgh.sh or any other free cloud provider so the output can be seen. https://surge.sh/help/getting-started-with-surge

Do send your code and online links both so the app can be seen how it works

**Question**

Make a simple todo app with reactJS, just need two features in the app

    a) To add/edit/delete a todo
    b) To display a list all todo

Few things to keep in mind

    1. When we add a todo, it should get added via the keyboards ENTER button as well, not just clicking on the add button.
    2. If you know how to use localStorage and can persist todo so that when we refresh the page, all my todo lists are still there that would be great.

**Question 2**

Use this page https://reqres.in/api/users?page=2 and display a list of users.

This api works page wise i.e page1, 2, etc. So there should be a similar paging in our app. Important to not that the number of pages are not fixed to 2, but its dynamic so paging should be dynamic as well

Use any ui library to display a list of user and having a paging option with it.
